

## Continuous Mortality Investigation

Institute and Faculty of Actuaries

### Members of the CMI Mortality Projections Committee

The Continuous Mortality Investigation (CMI) is seeking dedicated and enthusiastic volunteers from diverse backgrounds to join the CMI Mortality Projections Committee (MPC) from April 2026.

MPC oversees development and production of the CMI Mortality Projections Model, the CMI Mortality Monitor, and other work relating to mortality improvements.

We are looking for volunteers with a high level of interest in mortality research, and a commitment and enthusiasm to continue the long-standing work of the CMI in this field. Whether you have specific technical knowledge or an understanding of how MPC's work is applied in the market, we encourage you to apply. We aim to maintain a balanced committee that integrates both market insights and technical expertise.

We are committed to promoting diversity, equality of opportunity, and inclusion, and we actively encourage applications from a diverse range of potential candidates. Recognising and embracing the unique and diverse talents of our volunteers is fundamental to the success of the CMI.

### Role and responsibilities

What we offer:

- Opportunities to contribute to and influence MPC's work using your expertise.
- Involvement in developing the committee's regular outputs – the CMI Mortality Projections Model, Mortality Monitor, annual benchmarking survey, and annual research paper.
- Involvement in ad hoc research relating to mortality projections.
- Support from the CMI Secretariat, which handles day-to-day activities like arranging meetings and conducting analyses.

MPC works in conjunction with the Secretariat to help the CMI to undertake the following activities:

- Overseeing the continued production of MPC's regular outputs, including the CMI Mortality Projections Model, and identifying a range of further analyses and outputs that add value to CMI Subscribers.
- Delivering the outputs, as agreed annually with the Executive Committee, and assisting with the review process to ensure they are of a high quality.
- Publicising the work of MPC; in particular at IFoA conferences and via LinkedIn.
- Identifying emerging issues, including horizon scanning, and 'hot topics' of relevance to mortality projections.

View MPC's [Terms of Reference](#).

### Reporting

Members will report to the Chair of MPC.

### Tenure

Membership is normally for three years, with the potential to renew for a further three years.

Continuous Mortality Investigation Limited ("CMI") is registered in England & Wales (Company number: 8373631) with its Registered Office at: 1-3 Staple Inn Hall, High Holborn, London, WC1V 7QJ

## Time Commitment

The time commitment is typically equivalent to around 6-10 days a year. This is spread through the year, but with peaks in work ahead the key publications.

Much of the time commitment can be carried out at a time and day that best suits the volunteer, with the exception of attending meetings:

- MPC meets around eight times a year. Meetings are generally two to three hours in length, with around half remotely on Teams and half in person in central London, but always with an option for video call attendees, so location is not a barrier. Dates of these meetings are agreed well in advance and at a mutually convenient time for those involved.
- Ad hoc meetings may be needed on particular strands of activity that Committee members may be involved in. Such meetings may be arranged at shorter notice, at convenient times.

## Skills and experience

This opportunity is ideal for professionals working for a pension consultancy, life insurance company, or reinsurance company, or in academic research. However, we welcome applications from all sectors and experiences.

When recruiting, we aim to achieve a balanced Committee with a range of experience and backgrounds and avoid having more than one member from the same employer.

It will be helpful if the Committee members have:

- some experience of the CMI Mortality Projections Model and how it and MPC's other outputs are used within the pensions and insurance industries;
- an interest in, and willingness to develop, understanding of relevant technical methods and their practical application; and
- a high level of interest in mortality research and the role of the CMI.

## Benefits of committee membership

As Committee members, volunteers will:

- be able to influence and contribute to the work of MPC;
- be provided with excellent professional support and assistance, from fellow Committee members and the CMI Secretariat;
- further develop their technical expertise in this area;
- further develop an effective network of contacts across the industry; and
- have the opportunity to claim CPD for some of the activities associated with this role if they meet the criteria set out in the CPD Scheme.

## About the CMI

The Continuous Mortality Investigation (CMI) produces high-quality, impartial analysis, standard tables and models of mortality and morbidity for long-term insurance products and pension scheme liabilities on behalf of subscribers and, in doing so, aims to further actuarial understanding. The CMI's work is undertaken within a UK private company – CMI Limited – which is wholly owned by the Institute and Faculty of Actuaries (IFoA). More information on the CMI's work is available via the IFoA [website](#).
